INTRO- DUCTION

ON

- 10** RETHINKING SPACES
- 12** ABOUT WESTAG
- 13** THE GROUP
- 14** SUSTAINABILITY

We combine the best aspects of both an artisan philosophy and industrial production.

For us, modern production techniques, efficient processes and professional logistics are a matter of course – but so are passion, the spirit of innovation and a willingness to pitch in. Whether working with small batch sizes or creating custom assemblies – we always find a solution.

**RETHINK
SPACES**

With our versatile solutions and wide range of products, we give you the tools you need for rethinking space.

Materials shape rooms – and we expand the scope of what is possible in your design. From shuttering panels for perfect fair-faced concrete to solid surface material and laminates, our applications – worktops, window sills, doors and much more – are available in a huge range of combinations, all from a single source.

Doors for spatial philosophers

The door is an important aspect of spatial design, and its surface, colour and function all impact the room's look and feel. We produce the laminate for our HPL and CPL door collections ourselves and take the door to the next level with matt and metallic surfaces from FENIX and Homapal – all with the latest door technology and functions, of course. Our doors encourage you to rethink space, and we hope this catalogue will inspire you in this change of perspective.

NG

ABOUT WESTAG

Founded in 1901

Westag AG's roots date back to a small furniture factory founded by Joseph Ellendorff over 120 years ago. The business soon expanded to become a plywood factory, and doors, formwork panels, laminates and solid surface material were each gradually added to the portfolio as the years went by.

Two sites

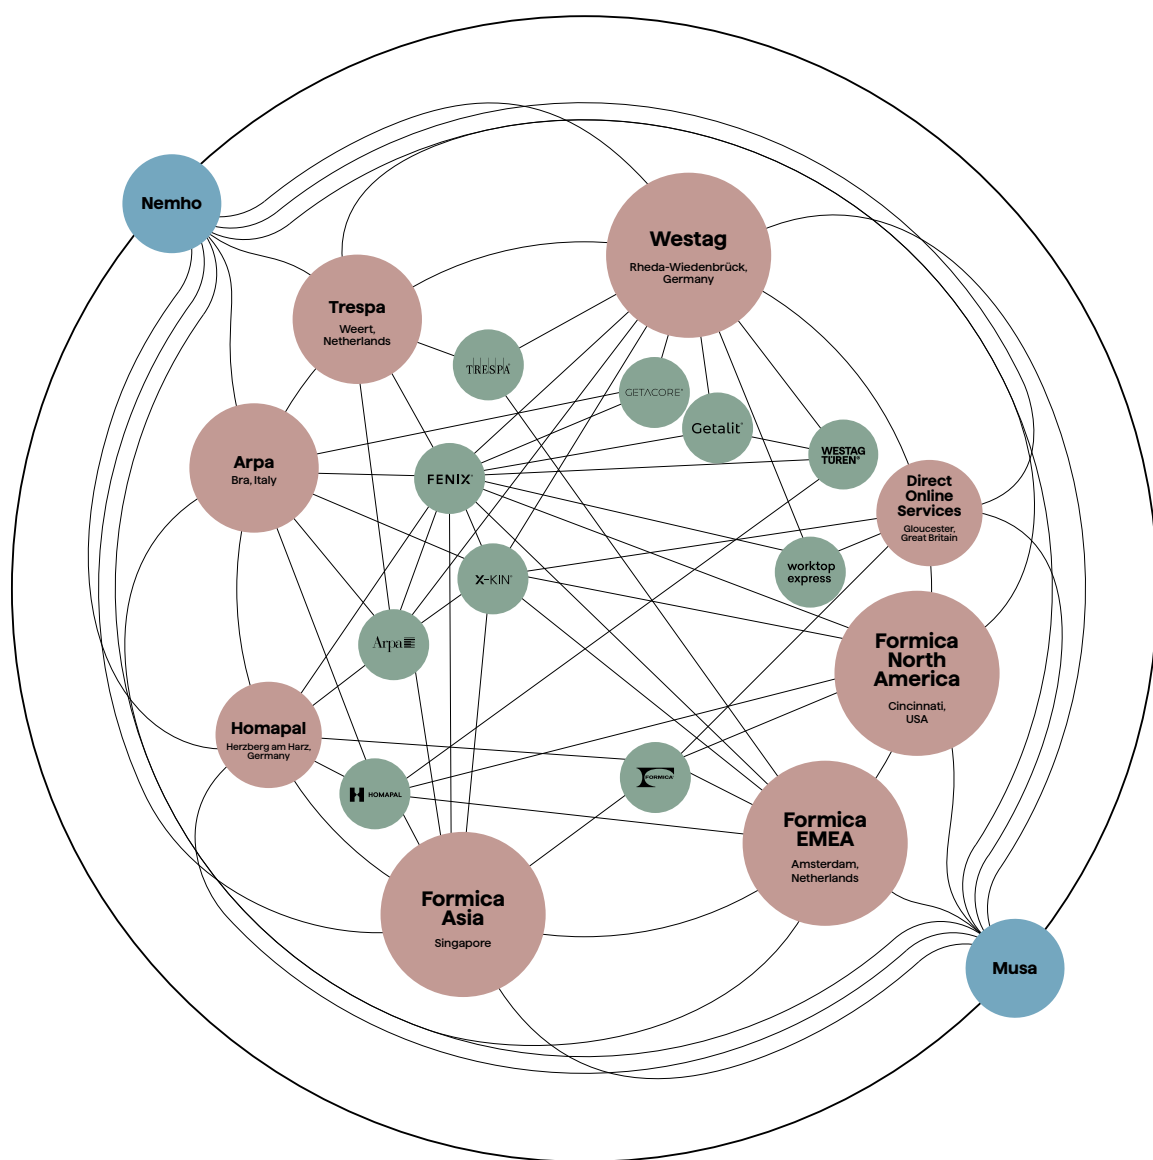

Since 1974, we have been making our high-quality products at two locations: Rheda-Wiedenbrück and Wadersloh. This cuts down on travel times and helps to protect the environment.

Over 1,000 employees

Today, more than 1,000 dedicated and creative staff – some of whom are the fourth generation in their family to work for us – put their heart and soul into the continuous evolution of our products every day. With currently more than 40 trainees, we also rely for our future on trained young staff from our own ranks.

THE GROUP

We are part of the leading global group in surface materials. We are FENIX, Formica, Homapal, Arpa, Westag, Trespa and Direct Online Services. All active in material technology. Panels, doors, worktops: our products range from HPL to solid surface, and from decorative metals to FENIX. Our 6,000 employees work in 40 countries around the world and our products are marketed in many more.

SUSTAINABILITY

Anyone who thinks about spaces also needs to think beyond them. The wood used in our doors is cultivated in sustainable forests. We are continuously working to make our processes and workflows less resource-intensive and our products more sustainable – with testing and validation provided by our quality assurance lab, independent audits, tight controls and certifications.

- **Made in Germany:**
Distances to our customers are short. For us, complying with – and exceeding – European environmental standards is a matter of course.
- **Sustainable raw materials:**
We procure the vast majority of our wood – our most important raw material – from certified sustainable forests.
- **Environmentally friendly production processes:**
We optimise our technology in many ways to reduce our impact on the environment. One example of this is the spraying robot on our door production line, which exclusively uses water-soluble lacquers.
- **Energy generation and emissions:**
We recycle our wooden waste using our in-house cogeneration plant. Our flue gas dedusting system ensures that we comply with all the legal guidelines, often landing well below the threshold.
- **Tight controls:**
Our in-house QA lab and independent audits ensure safety.
- **Sustainable products:**
We produce high-quality, durable products that last for years, thus helping to save resources.
- **Transparency:**
We conduct analyses of our material lifecycles in order to ensure transparency and identify areas for improvement.

OPENING THE DOOR TO EMOTION

Metals have always held a great fascination because they behave so differently to other materials: they arouse our interest and change their appearance depending on the incidence of light and time of day.

Homapal has developed SRM – Scratch Resistant Matt: a highly scratch resistant matt surface with anti-fingerprint properties. For the first time, this extraordinary surface is now also available for interior and functional doors.

- **An elegant, matt metal finish with anti-fingerprint characteristics**
- **Resistant to scratches thanks to SRM (Scratch Resistant Matt) technology**
- **Versatile and fascinating – special manufacturing process for extraordinary depth effect**
- **100% exclusive: Westag is the only manufacturer that offers doors with metal surfaces from Homapal for any function, from wet rooms to Fire prevention**

FENIX® DOORS

AWWARD WELCO

Coming home, discovering new things, seeing old acquaintances again – doors open up more than just rooms. With the innovative materials from FENIX®, they themselves become an experience: an extremely matt look and soft touch invite you to experience doors with all your senses.

FENIX DOORS FX 0752 NTM Grigio Antrim

MI HOME

Pleasant to touch and durable: As an extremely matt surface, FENIX NTM[®] gives doors an elegant and valuable appearance. Surface, edge and frame in the same colour make doors look as if they have been cast from a single mould. Especially as functional doors, they prove that robustness and elegance do not have to be a contradiction in terms.

WITH ProEdge FOR OUTSTANDING DURABILITY

ProEdge provides a colour-matched, impact resistant edge, available for all FENIX NTM[®] colours in the FENIX[®] DOORS collection. More info on ProEdge: p.102

and information
on surface
properties:
p.82

At a glance

- **68 plain decors to aid with designer concepts and provide guidance**
- **24 wood decors to make even public spaces feel homelike**
- **Various decors also available as FENIX NTM®**
- **Thanks to our in-house HPL production, all decors can be used in other interior design elements to ensure they match**
- **Blue Angel certification**

Our plain and wood door decors bring rooms to life and maintain their vibrancy even after continued and intensive use. Getalit is lightfast and resistant to abrasion, impact resistant and common household chemicals.

Its combination of functionality and design makes HPL the perfect door surface for a wide range of applications, from offices to spas, classrooms and hospital wards.

Portalit®

THE ALLROUNDER

Whether combined with plain or wood decors, our durable CPL door surfaces can maintain a reserved air while still adding a personal note to your room concept. They can also be combined with glass openings or strip inserts for even more individuality. And for situations that require even greater durability, all our Portalit decors are also available as HPL in our Getalit collection. Couldn't be easier, right?

Portalit Ei 342 Rb Oak Eleganzia

- **Straightforward versatile surface that lends (living) spaces a personal note**
- **Expertise from a single source – Westag is the only door manufacturer that produces its own HPL and CPL**
- **Cost-optimize your project planning: All Portalit decors are also available in Getalit for more demanding applications**
- **One-piece design: patented 3-sided round edge made of the surface**
- **Blue Angel certification**

Westalack®

FROM SMART TO PREMIUM

Not all lacquered doors are made equal:
In Westalack Premium, Westalack Soft and
Westalack Smart, we offer a selection of
finishes so you can make the right choice
to match your durability, aesthetic and
budgetary requirements.

Provence Type 4002 in Westalack Premium Arctic White (similar to RAL 9016)

Overview of all finishes and information on surface properties of Westalack Premium, Westalack Soft and Westalack Smart: p.90

Velvet Line Type 7505 and smooth door in Westalack Soft Sira White (similar to RAL 9003)

WESTALACK PREMIUM

High-quality, sevenfold lacquering using only water-based, solvent-free UV acrylic lacquers creates semi-matt, gleaming surfaces to meet even the most exacting of requirements. Perfect for combining with chalet-style designer series such as Provence and Bretagne, as well as purist variants like Lineo and Westaline.

WESTALACK SOFT

The name says it all: a finish with a silken-soft feel and matt look. When combined with subtle, easy-to-clean embossing as it is in our Piemont and Velvet line designer series, this finish is sure to leave a lasting impression. Smooth doors also available in Sira White.

WESTALACK SMART

The smart solution for doors with no embossing or profiles can be combined with standard Westalack Premium shades of white.

At a glance

- **Lacquered doors for individual design and quality requirements: from Westalack Smart to Soft and Premium**
- **Embossed, milled or with profiles – lacquered doors make your interior design style shine**
- **Westalack Premium 7-coat lacquering: exclusively with water-based, solvent-free UV acrylic lacquers**
- **Westalack Premium and Smart can be combined with CPL and HPL doors in matching colours for applications that require even higher resistance**

VIEW

DOORS WITH STRIP APERTURES

Light and transparency lend rooms a friendly, lively face. Our portfolio of designer doors ranges from slender strip apertures to dominating glass surfaces, from ground glass to a wide range of sand-blasted motifs: clear or vibrant, vertical or horizontal. Doors with strip apertures bring a ray of light into any room.

At a glance

- **Strip apertures provide transparency and a clean design**
- **All glazings made of safety glass**
- **Large selection of surfaces and decors**
- **Sandblasted glazing motifs add interesting accents**

Sliding door in front of the wall, in Portalit Ei 767 in Oak Adria

SLIDING DOORS

IN FRONT OF THE WALL

Sliding doors are spatial sorcerers – with just a small movement of the hand, they can increase the size of a living area and create space to move around in. And as if that weren't enough, they also fit in small spaces, niches and narrow passageways. Sliding doors that run in front of walls are easy to install, even after the original construction. They are available with or without frames, with optional locking mechanisms, and their look can even be tailored to match your other doors.

At a glance

- Can be mounted directly upon the wall or with a frame
- Easy to install post-construction
- Lockable with an end post
- Also suitable for contract properties – can carry doors up to 80 kg in weight
- Available in wide range of decors and Westalack

Scope of delivery: p. 92

CONSTRUCTION VARIANTS

The basic version: the sliding door element is fitted directly upon the wall. A high-quality guiderail ensures that the door slides quietly and smoothly. The discreet cover angle in a matching decor covers the guide rail completely. It doesn't get any simpler than this.

The basic version (left) is extended using an end post. This construction allows the sliding door to be locked.

For anyone wishing to hide the open wall reveal, a sliding door construction including door frame is the right choice.

Our recommendation
Can also be retrofitted using existing Westag door frames.

The sliding door construction with door frame (left) is extended using an end post that allows the sliding door to be locked. No further equipment is required.

Our recommendation
All sliding door elements can be fitted with an optional damping function for opening and closing.

Shell handle

Warded lock (BB)

Lock PC (PZ)

Bathroom lock (BAD)

All shell handles available in stainless steel and black matt

RUNNING INSIDE THE WALL

Sliding doors that run inside the wall are both aesthetically pleasing and functional. With just a gentle push, they disappear inside the wall, leaving space for you to pass through. They create space for furniture, pictures and lighting to be placed directly on the wall.

At a glance

- **Installed in existing wall openings or prefabricated cabinet systems**
- **The best sliding door for saving space**
- **Available with closing and opening damping function and push-to-open options for even more convenience**
- **Available in a wide range of surfaces and as a Westalack Premium lacquered door**

CONSTRUCTION VARIANTS

Sliding door system running inside the wall for customised, individual installation in the customer's existing wall openings. The transition from the wall opening to the door frame must be prepared accordingly.

Sliding door system running inside the wall for prefabricated cabinet systems. The prefabricated constructions by well-known manufacturers are installed in drywall or masonry. The specially designed door frame covers the edges of the wall opening reliably.

 Scope of delivery

 On-site components

Sliding door running inside the wall in Portalit A 222 Pma Arctic White

SYSTEM FOR CUSTOMERS' GLASS SLIDING DOORS

Glass sliding doors don't separate rooms – they connect them. They create transparency, bring light into the room and save space. The 40/80 sliding door system, which now has a casing for existing glass sliding doors, can be mounted directly on the wall or integrated into existing frames – perfect for post-construction installation or refurbishment. The system also combines perfectly with other doors, thanks to decor and lacquer matching.

CONSTRUCTION VARIANTS

The basic version: the glass sliding door is fitted directly on the wall, using the system. A high-quality guide rail ensures that the door slides quietly and smoothly. The cover angle in a matching decor reliably covers the guide rail. The casing for glass sliding doors has a pure, discreet effect.

The basic version (left) is extended using an end post. This construction enables the glass sliding door to be closed flush with the end post (not lockable).

For anyone wishing to hide the open wall reveal, a sliding door construction including door frame is the right choice. Frames, cover angles and casings for glass sliding doors are available in the same decorative patterns.

The sliding door construction with frame (left) is extended with an end post. This construction enables the glass sliding door to be closed flush with the end post (not lockable). Frames, cover angles and casings for glass sliding doors are available in the same decors.

The cover angle and casing are available in a wide range of surfaces.

Scope of delivery: p. 92

At a glance

- Can be mounted directly upon the wall or with a frame
- Easy installation, even post-construction
- Combines well with other doors – cover angles with decors and lacquering from the Westag door collection

Cover angle and casing in Portalit A 446 Pe Putty

70	HOSPITALITY
72	HEALTHCARE
74	EDUCATION
76	OFFICE

WHAT A DOOR DOES FOR YOU

Wooden doors can perform a range of functions, such as combining fire protection and soundproofing – but more than that, they can also help to make spaces more accessible. Doors with verified characteristics can fulfil even the most exacting of requirements.

The five functions described here – four defined RAL characteristics plus accessibility – can be achieved with just one approx. 43 mm thick door leaf as an element with a frame and suitable hardware.

INNOVATIONS

Living, office, hospitality, healthcare and education – our doors are used in a range of sectors with very different requirements in terms of design and functionality. In order to exceed expectation in all of these industries, we have expanded our portfolio with a special focus on the needs of the property business:

50 MM RANGE

- **One thickness for all the doors in the property, available with a wide range of frame types, reduces planning complexity and makes installation easier**
- **Applied consistently for a wide range of functions, such as fire prevention, burglary prevention and combinations of the two**
- **Meets the stricter requirements now applicable in many sectors due to the introduction of European standards**
- **Available with all Westag frame structures – including ProEdge**

More information:
p. 100

NEW FRAME STRUCTURE

- **Fitting allowance increased up to 4 mm**
- **Lower light transmission and air permeability**
- **High durability thanks to extra-sturdy jamb plate**
- **With new, built-in, screw-on hinge slot for doors up to 100 kg**

More information:
p. 108

ProEdge

- **Edge impact resistance S for Homapal, FENIX DOORS, Getalit and Portalit**
- **Sturdy, highly impact resistant and dirt resistant**
- **16 decors, including all FENIX NTM® colours in the FENIX® DOORS collection**
- **Available with all rebate geometries, from flush closing to standard rebate and double-rebate**
- **Suitable for all functions, such as fire and burglary prevention**
- **Door thicknesses from 40 mm to 71 mm, incl. our new 50 mm range**

Overview of our range
of edges: p. 102

INSPIRATION

In offices, hospitals, hotels, schools and homes around the world, doors are increasingly stepping out of the shadows and into the spotlight.

Surfaces, decors and design series provide a means of orientation with strong colours in kindergartens, create a cosy atmosphere in hospital wards, and reflect corporate design in office spaces.

However, sophisticated engineering for a wide range of door functions is equally important. Let our colleagues inspire you to rethink your space.

ON

LIVING & DESIGN

Salvatore Figliuzzi
Head of Marketing and Strategy
Westag AG

“Was the door intended merely as a means to an end? Usually smooth and white, it has often been no more than an afterthought in a room. But the modern door is becoming increasingly important as an aspect of interior design.

With our wide range of configuration options, almost anything is possible for a creative mind. I never cease to be amazed by the wide range of surfaces, colours, decors and structures we offer – to bring every interior design style and trend to life. And we’re always working on new products, too – right now, the ‘Matt & Metal’ surfaces from FENIX and Homopal are my absolute favourite.”

HOSPITALITY

“A hotel door needs to speak two languages: that of the corporate design, and that of its function.

That’s a challenge we love to tackle. Uniqueness and recognisability are becoming more and more important to hotels and hotel chains. With surfaces designed to match the wall cladding or the room’s furniture, our doors blend in seamlessly with the overall design. The details of the design are incredibly important to us – and that goes for the fitting technology too. After all, our clients’ requirements are just as diverse as the number of places our doors are used – from hotel rooms to conference as well as event suites, and even spa areas.”

Alexander Sasse
Head of Price/Product Management
Westag AG

Ludger Thiele
Seminar Facilitator/Product Manager
Westag AG

Mathias Lingnau
Key Account Manager, Object Solutions
Westag AG

HEALTHCARE

“When I visit hospitals, it always makes me proud to see the performance our doors provide in the hustle and bustle of daily medical work.

It goes without saying that they need to fulfil many different functions, be extremely robust, and also easy to clean. At the same time, wood decors and homely colours mean that they are now increasingly adding a natural feel and warmth to hospital wards. This is all thanks to our Getalit HPL decors, which we produce ourselves, and are thus highly customisable. Environments like this improve the recovery process, and also enhance the well-being of doctors and carers.”

EDUCATION

“Wherever there’s children about, doors require a special set of skills. In kindergartens, playschools and schools, doors need to be both sturdy and accessible. For instance, panic locks ensure that a door can be opened from the inside at any time during an emergency, even if it is locked. Rounded edges and a special finger guard mechanism prevent injuries. Strong colours also improve accessibility by helping to provide orientation, while glass elements allow for a clear view of the corridor ahead.

**Developing doors
that allow children
to play and learn
without obstacles
is my
passion.”**

Frederic Roth
Technical Development
Westag AG

Holger Jacke
Head of In-House Sales
Westag AG

Westag AG

OFFICE

“Creating an office people look forward to working in is a question of design – and doors are design.”

Our customers never cease to be amazed by what is possible – doors with metallic surfaces that feel warm and comfortable, for example, or with fanlights and semi-transparent side panels that let more light into rooms, like extra windows. Our doors are our way of helping make offices places where people love to come together – particularly in a time where so many have become used to working from home, and when competition for skilled workers is so fierce.”

LIVING

When it comes to choosing doors for living spaces, design is often the dominating factor. But the “internal values” of a doors shouldn't be forgotten, either.

FUNCTIONAL DOORS

Functional doors are also recommended for use in living spaces, as they can greatly improve comfort in a number of ways:

- Soundproof doors for offices, bedrooms and utility rooms
- Energy-saving doors for unheated attics and basements
- Water-resistant doors for bathrooms

APARTMENT ENTRANCE DOORS

Designed to match the interior doors, but with additional functions – after all, apartment entrance doors need to meet stricter requirements and handle greater stresses and strains in terms of climate. Burglar protection also has an important role to play. Doors with higher resistance classes can be fitted with additional options such as three-point locks and hinge-side protection devices to prevent them from being levered open, thus providing greater security.

SLIDING DOORS

Living space is becoming more and more scarce. For new builds and rebuilds alike, when it comes to making the most of small spaces, sliding doors are always a great choice. They are a great way of partitioning off a small area for use as a home office, for example. A glass sliding door or a sliding door with a glass opening also brings more light into a room, and establishes a visual connection between the partitioned space and the rest of the apartment.

Brief
description of
all door functions:

Requirements for barrier-free use may need to be considered.

HOSPITALITY

Hotels house a multitude of different room types under one roof. From bedrooms to spas, each one comes with its own specific requirements in terms of door functionality. At the same time, all these doors need to fit within a strict design concept.

DESIGN

Doors made to match with the same decor as the edge and frame are the perfect fit for this concept. Solutions like ProEdge can provide a harmonious aesthetic and high resistance levels, too. Costs can be optimised by combining different door surfaces with the same decor that are going to be used for different applications and subjected to different stresses and strains. Using the same surfaces throughout your interior design on elements such as wall cladding, partitions and furniture will really round off the look and feel of a property.

DAMP AND WET ROOM

Doors at swimming pools and in shower and spa areas need to be able to withstand splashes and high humidity levels. It is important to ensure that all the components are optimised for use in a damp environment. This means the following features are essential:

- Frame structures that prevent the entry of moisture,, e.g. ProEdge, PU-Edge or plastic surface-mounted edging
- Corrosion-proof hinges
- Splash-proof frames for damp rooms and stainless steel frames for wet rooms

SOUNDPROOFING

A lot of people in one place usually means a lot of noise. As such, soundproofing is particularly important in such situations. Seal-tight doors with three-sided seals and adjustable floor seals ensure that residents can sleep undisturbed.

In FENIX DOORS, Getalit and Portalit, Westag offers high-quality surfaces for doors and interior design, all from a single source: see p. 80 for details

Requirements for barrier-free use may need to be considered.

HEALTHCARE

In hospitals, rehab centres, medical practices, care homes and senior residences, hygiene and accessibility are particularly important - and this applies just as much to doors as to any other aspect of the building.

ACCESSIBILITY

Doors shouldn't be a barrier to the elderly or ill, and carers also need to be able to move through them as quickly as possible – after all, every second counts in an emergency. Extra-wide and double doors provide plenty of space for wheelchairs and hospital beds. There are also a wide range of other technical solutions that play an important role in accessibility, including automatic swing door drives and ergonomic handles that can be operated without on-hand contacts. One simple solution is to position handles at a height of 850 mm. The DIN 18040 standard covers such considerations.

DURABILITY

Surfaces in hospitals need to be made of sturdy HPL and easy to clean. Due to the high levels of stress and strain they need to withstand, they are often combined with edge and step protection. PU-Edges are the recommended solution in many cases due to their special characteristics:

- Shock and impact resistant for perfect protection against damage to the edges and adjacent surface areas
- Non-porous for high hygiene standards
- Moisture-resistant

SPECIAL FUNCTIONS

Doors in the healthcare sector need to handle all kinds of different tasks. In X-ray rooms, for example, radiation protection doors with full lead layers that cover the entire opening and closing areas and lead-lined frames are required. Doors in forensic departments need additional security functions to protect patients and personnel.

For full details on
PU-Edges and
potential alternatives,
see p. 102

EDUCATION

Doors for schools, universities, vocational colleges and kindergartens need to check a large number of boxes. They must withstand a lot of stress and strain, enhance security and aid orientation.

SURFACES AND DESIGN

Doors with HPL surfaces are particularly well-suited to use in the education sector. They are extremely sturdy and can be combined with a wide range of functions, such as soundproofing, while their plain decors provide a colourful, child-friendly environment and – even more importantly – help the children to find their way around more easily.

INJURY PREVENTION

Children often have things other than their own safety in mind. There are several ways to protect them from injury and accidents around doorways:

- Doors with rounded edges
- Finger guard mechanisms where the hinges meet to prevent fingers from getting crushed
- Side glass elements to provide a clear view of the path ahead

COMBINING FIRE PREVENTION WITH ACCESSIBILITY

Doors in public facilities need to comply with fire safety requirements while also guaranteeing accessibility:

- Free-swings door closers close automatically in case of smoke or fire
- Panic locks – often combined with panic bars or push bars – ensure that a door can be opened from the inside at any time during an emergency, even if it is locked. These solutions also facilitate quick evacuation in case of an emergency.

OFFICE

Room concepts for offices are becoming increasingly individualised. Flex-desk solutions, separate areas for confidential discussions, space for town hall meetings: whatever the scenario, rooms – and thus doors, too – need to adapt to modern ways of working.

SURFACES

When faced with such a wide variety of requirements, it's helpful to have a selection of easily combinable surfaces to choose from. The main factor in the decision is what stresses and strains the door needs to be able to withstand, but its role in representing the company is also important. Special ultra-matt or metallic surfaces help to create attractive areas for discussion, and these can be combined with other sturdy surfaces for cost-optimised project planning.

TRANSPARENCY

Glazing in office buildings has two jobs: it needs to optimise the lighting situation, especially in inwardly oriented rooms, and also needs to promote dialogue as part of an open corporate culture. There are a range of options available for this:

- Strip apertures
- Glazed side panels
- Fanlights

Satin-finished or sandblasted glazing lets in more light without compromising confidentiality.

SOUNDPROOFING

Focused work requires a calm environment. Soundproof doors – available in a variety of classes – provide the necessary peace and quiet while also helping to preserve privacy and data protection standards by ensuring nothing leaks outside the room.

Eye-catching effects in public-facing areas can be provided by the metallic surfaces of Homapal and FENIX Doors; see p. 80

GLAZING

For larger glass openings, we recommend safety glass in compliance with DIN, which is available for many types of glass.

Deviating from the specified glass types, similar designs can also be used. The image of the flower below demonstrates the transparency of each type of glazing.

Glazing for glass openings, fanlights and side panels is available for almost all functional doors with the corresponding specifications. Special requests for design features can also be implemented.

DOOR SETS AND DOOR CON- STRUCTIONS

A wide range of options are available when it comes to combining door leaves and frame variants in the various door thicknesses and rebate configurations on offer. Choosing the right one requires consideration of the functions of the door sets themselves, but also the technical requirements on site and, last but not least, the aesthetic expectations.

For some functions, the door leaves and frames always need to be ordered from the same manufacturer. In addition to the wooden lining frames shown here, all the Types listed below are also available with a steel frame or a block frame.

TYPE 40/TYPE 43

Door set Type 40/Type 43,
Door thicknesses approx. 40-45 mm
With wooden lining frame,
standard rebate

TYPE 40/TYPE 43

Door set Type 40/Type 43,
Door thicknesses approx. 40-45 mm
With wooden lining frame,
flush closing

TYPE 50

Door set Type 50,
Door thicknesses approx. 50-52 mm
With wooden lining frame,
single rebate

TYPE 50

Door set Type 50,
Door thicknesses approx. 50-52 mm
With wooden lining frame,
flush closing

TYPE 65/TYPE 71

Door set Type 65/71,
Door thicknesses approx. 67-73 mm
With wooden lining frame,
double-rebate

TYPE 65

Door set Type 65,
Door thicknesses approx. 67-69 mm
With wooden lining frame,
butt joint with flush-rabate

TYPE 40, DOOR THICKNESS APPROX. 40 MM
 Tubular chipboard door
 Damp room door with tubular chipboard
 Wet room door with tubular chipboard

TYPE 40, DOOR THICKNESS APPROX. 40 MM
 Solid chipboard door
 Fire prevention door T30 (EI30)
 Smoke protection door RS (S200)
 Burglary prevention door RC2
 Soundproof door SK27/1
 Damp room door with solid chipboard
 Wet room door with solid chipboard

TYPE 40, DOOR THICKNESS APPROX. 40 MM
 Burglary prevention door RC2
 Soundproof door SK32/2

TYPE 43, DOOR THICKNESS APPROX. 43 MM
 Fire prevention door T30 (EI30)
 Smoke protection door RS (S200)
 Burglary prevention door RC2
 Soundproof door SK37/3
 Wet room door

TYPE 50, DOOR THICKNESS APPROX. 50 MM
 Solid chipboard door
 Fire prevention door T30 (EI30)
 Smoke protection door RS (S200)
 Burglary prevention door RC2
 Soundproof door SK27/1

TYPE 50, DOOR THICKNESS APPROX. 50 MM
 Fire prevention door T30 (EI30)
 Smoke protection door RS (S200)
 Burglary prevention door RC2
 Soundproof door SK32/2
 Soundproof door SK37/3

TYPE 65, DOOR THICKNESS APPROX. 67 MM
 Fire prevention door T30 (EI30)
 Smoke protection door RS (S200)
 Burglary prevention door RC2
 Burglary prevention door RC3
 Soundproof door SK37/3

TYPE 65, DOOR THICKNESS APPROX. 67 MM
 Fire prevention door T30 (EI30)
 Smoke protection door RS (S200)
 Burglary prevention door RC2
 Burglary prevention door RC3
 Soundproof door SK40/3.5

TYPE 65, DOOR THICKNESS APPROX. 67 MM
 Fire prevention door T90 (EI90)
 Smoke protection door RS (S200)
 Burglary prevention door RC2
 Soundproof door SK27/1
 Soundproof door SK32/2

TYPE 71, DOOR THICKNESS APPROX. 71 MM
 Burglary prevention door RC2
 Burglary prevention door RC3
 Soundproof door SK42/4

EDGE

The role of edges is not to be underestimated in determining whether a door fulfils all the functional and aesthetic requirements. The best combination of frame construction and door edge will depend on the usage frequency, application area and design concept.

FRAME STRUCTURES

ProEdge

ProEdge is the new impact-resistant yet visually appealing frame structure in our edge range. It complements our new FENIX NTM surfaces with colour-coordinated edges.

FENIX DOORS FX 0718 NTM Grigio Londra, ProEdge NCS S 5502-Y (FX 0718)

At a glance

- **Edge impact resistance S according to RAL-GZ 426 for Homapal, FENIX DOORS, Getalit and Portalit**
- **Robust, particularly impact resistant and insensitive to dirt**
- **16 decors, including all FENIX NTM colours of the FENIX DOORS collection**
- **Many rebate geometries from flush closing and standard rebate to double rebate**
- **For every function such as fire prevention and burglary prevention**
- **Door thicknesses from 40 mm to 71 mm**

ADDITIONAL FRAME STRUCTURES

Rebate edge coating

- For door elements without visible joints
 - Available with matching decors for many surfaces, door leaf thicknesses and rebate configurations
 - Especially suitable for living spaces and low-wear public spaces
-

PU-Edge

- Moisture- and impact-resistant
 - Non-porous, biologically sound design for high hygiene standards
 - Standard range with six colours, additional colours (RAL, NCS) possible
 - Suitable for heavy use, e.g. in hospitals
-

Plastic surface-mounted edging

- Highly stable and moisture-resistant, repair possible
 - Three standard colours, additional selection of single colours available
 - Especially suitable for wet and humid rooms, particularly in public spaces
-

Frame wood

- High-quality solid wood construction visually accentuates the technology of the door structure
 - Refinishing possible
 - Six types of wood: maple, beech, oak, ash, light and red hardwoods
-

Exposed lipping made of wood

- Uniform, elegant look in solid wood
- Easy to refinish, if necessary
- Six types of wood: maple, beech, oak, ash, light and red hardwoods

DOOR EDGE OPTIONS

Rectangular edge

The simplest edge style accentuates a timeless, minimalistic design. This edge is available for all rebate configurations and door constructions.

Postforming round edge

Postformed edges are particularly dirt-resistant, thanks to the seamless transition between the surface and the edge. This edge is available for flush closing doors type 40/type 43 up to a size of 2110 x 985 mm.

Segmental arch edge

The segmental arch edge is characterised by a soft transition between the surface and the edge. This edge is available for rebated doors type 40/type 43 up to a size of 2110 x 985 mm.

Soft edge

The two-millimetre bevelled edge is often used in pre-schools and nursing homes, in accordance with accident prevention and insurance requirements, to minimise the risk of injury. This edge is available for flush closing doors and rebated doors type 40/type 43/type 50.

LOCKS

For simple interior doors, Class 1 single-point locks are often the standard – but the spectrum of available options ranges all the way up to technically and visually sophisticated variants with slam locks and magnets for quiet closing. For apartment doors with RC2 and RC3 Burglary prevention classification, locks with swing bolts and 3 or even 5-point locks provide greater security.

For property and functional doors, the choice is almost endless, with special lock variants available for Fire prevention, wet rooms and radiation protection purposes. Locks for doors on emergency exit routes, constructions with double-leaf doors, and sliding doors also require highly specific designs.

HINGES

Door hinges can add a twist of their own to the design of a door set, especially when combined with handles. The material qualities and colour of these fitting parts should match one another, and ideally the finish of the door and frame, too. Like handles, most people will usually choose silver-finish or stainless-steel hinges. However, black variants are becoming increasingly popular, and completely individual colouring is also possible for properties. When door sets need to meet high expectations in terms of design even when open, concealed hinges are often used instead of visible ones.

Lock PC
(PZ)

Bathroom lock
(BAD)

The range of options available for this is just as huge as it is for locks. Here too, the component needs to be able to meet a wide range of requirements for domestic use and – in the case of technical doors – provide a number of different functions. Whatever your application, we recommend always using hinges with 3D adjustment, as these provide the perfect conditions in terms of stability, durability, ease of installation, and post-installation adjustment. Below is a selection of our hinges, grouped by whether they are rebated or flush closing and whether they are designed for combination with wooden lining or steel frames.

FRAMES

NEW FRAME STRUCTURE

When it comes to installing door frames, a few millimetres in the wall opening can quickly create a lot of additional work. That's why we created our new frame structure – for extra fitting allowance with the same, tried-and-tested stability.

- ① Fitting allowance
- ② Rebate width
- ③ Seal
- ④ Jamb plate
- ⑤ Screw-on hinge slot

Optimised frame structure with new, bevelled, screw-on hinge slot

OPTIMISED REBATE GEOMETRY

- ① Fitting allowance increased by up to 4 mm by adjusting the ② rebate width from 11 to 13 mm
- ③ Seal mounted deeper on the door surface for lower transparency and permeability
- Sturdy ④ jamb plate: high durability and rigidity thanks to 25 mm thickness

BUILT-IN SCREW-ON HINGE SLOT FOR APPROVED DOOR FRAMES

- Bevelled shape for optimised mounting
- Higher strength: suitable for doors up to 100 kg

The tried-and-tested, built-in cup hinge slot is also available exclusively as an optimised frame structure with additional fitting allowance.

WOODEN LINING FRAMES

Wooden lining frames in all conventional wall thicknesses, with architrave widths up to 100 mm and in a wide range of designs, from traditional to modern.

REBATED

FLUSH CLOSING

Wooden frame, standard, rounded (Type SL)

Suitable for doors with rectangular or round edges. Also available with architrave widths of 50, 65, 70, 80, 90 and 100 mm for Getalit, Portalit, Dekorit and Westalack.

Wooden frame, slightly rounded (Type SE)

With small radius – for both rectangular and round door edges. Also available with architrave widths of 50, 65, 70, 80, 90 and 100 mm for Getalit, Portalit and Westalack.

Wooden frame, rectangular edges (Type EK)

Straight-edged variant especially suited to use with rectangular edges. Also available with architrave widths of 50, 65, 70, 80, 90 and 100 mm for FENIX and Getalit.

Wooden frame P1, profiled (Type P1)

Profile frame suitable for use with chalet doors like 'Provence'. Available in Westalack Classic White finish (sim. to RAL 9010), for Westalack Premium.

CALCULATING FRAME DIMENSIONS

How big does your frame need to be? Exactly the right size – every time. The table below will help you calculate the right size for your order.

REBATED CLOSING

Size to be ordered (mm)		65	70	80	100	125	145	165	185	205	225	240	270	290	310	330 ¹
Adjustment range	From	65	70	80	100	121	141	161	181	201	221	236	266	286	306	326

Adjustment range	From	80	100	121	141	161	181	201	221	236	266	286	306	326
	To	90	116	141	161	181	201	221	241	256	286	306	326	346

¹ Available for wall thicknesses up to 590 mm

BLOCK FRAMES

Wooden block frames offer the perfect designer twist for a variety of profiles and species of wood, and can also solve a wide range of wall issues. The available options range from premium-quality solid-wood structures for perfect, wall-flush variants to very simple designs for prefab renovations. In addition to the designs shown here, custom options are often also available as a tailor-made solution for specific building requirements.

BR45

Block frame, cross section approx. 45 x 80 mm
Installation in front of wall (in-wall available on request, depending on function) for door thicknesses approx. 40 – 45 mm with standard rebate

Functions/constructions

Fire prevention T30 (EI30) – Type 40/43
Smoke protection RS (S200) – Type 40/43
Burglary prevention RC2 – Type 40/43
Soundproofing SK27/1, SK32/2, SK37/3 – Type 40/43
Tubular chipboard – Type 40
Solid chipboard core – Type 40

BR68

Block frame, cross section approx. 68 x 80/90 mm
In-wall installation approx. 68 x 80 mm
Installation in front of wall approx. 68 x 90 mm
For door thicknesses approx. 40 – 73 mm with range of rebate configurations

Functions/constructions

Fire prevention T30 (EI30) – Type 40/43, 50, 65
Smoke protection RS (S200) – Type 40/43, 50, 65
Burglary prevention RC2, RC3 – Type 40/43, 50, 65
Soundproofing SK27/1, SK32/2, SK37/3 – Type 40/43, 50, 65
Tubular chipboard – Type 40
Solid chipboard core – Type 40, 50

BR75

Block frame, cross section approx. 75 x 80/95 mm
In-wall installation approx. 75 x 80 mm
Installation in front of wall approx. 75 x 95 mm
For door thicknesses approx. 40 – 67 mm with range of rebate configurations

Functions/constructions

Fire prevention T30 (EI30) – Type 40/43, 50, 65
Smoke protection RS (S200) – Type 40/43, 50, 65
Burglary prevention RC2, RC3 – Type 40/43, 50, 65/71
Soundproofing SK37/3, SK40/3,5, SK42/4 – Type 40/43, 50, 65/71

BR95

Block frame, cross section approx. 95 x 80/95 mm
In-wall installation approx. 95 x 80 mm
Installation in front of wall approx. 95 x 95 mm
For door thicknesses approx. 65 – 67 mm with range of rebate configurations

Functions/constructions

Fire prevention T30 (EI30) – Type 65
Smoke protection RS (S200) – Type 65
Burglary prevention RC2, RC3 – Type 65
Soundproofing SK37/3

BR78

Block frame, cross section approx. 78 x 55 mm
Primarily for use in domestic or simple property applications with option for fanlights and glazed side panels
In-wall installation approx. 78 x 55 mm for door thicknesses approx. 40 mm with standard rebate

Functions/constructions

Soundproofing SK27/1 – Type 40
Tubular chipboard – Type 40
Solid chipboard core – Type 40

STEEL FRAMES

With their highly sturdy construction and excellent durability, steel frames are the perfect choice for many public spaces, especially combined with wooded doors. The frame's service life can even be significantly enhanced with details such as an increased sheet thickness (2.0 instead of 1.5 mm) and reinforcement in the lockbolt and latch areas – particularly useful for barracks, schools and other public buildings.

Galvanized/protection-primed frames are either coated on site or powder-coated prior to delivery so your construction can move onto the next phase much quicker and more easily. Depending on your technical and visual requirements, our V2A and V4A stainless steel frames may also present a useful alternative.

STEEL FRAMES IN SOLID WALLS SZ-M

Standard rebate/double rebate

Flush closing/butt joint with flush-rebate

STEEL FRAMES IN LIGHTWEIGHT WALLS SZ-L

Standard rebate/double rebate

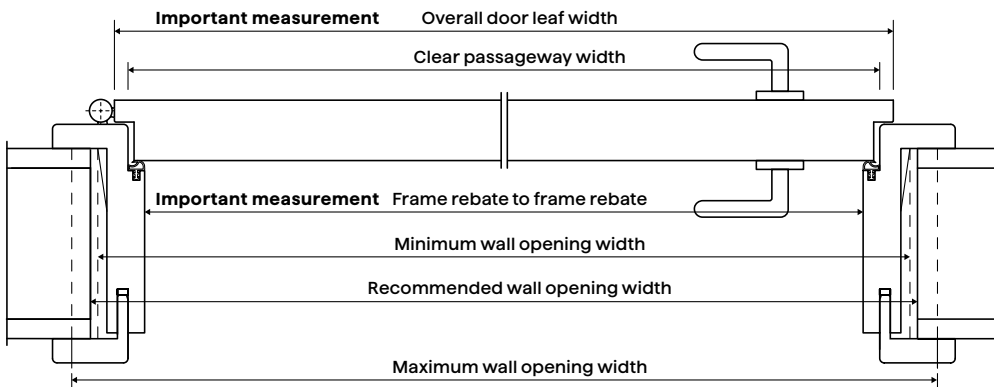

Flush closing/butt joint with flush-rebate

TECHNICAL TERMS

DOOR DIMENSIONS

DIRECTIONS FOR DOORS ACCORDING TO DIN

DIN direction left

The hinges are on the lefthand side when the door is closed.

DIN direction right

The hinges are on the righthand side when the door is closed.

DIN DIRECTIONS FOR SLIDING DOORS

DIN direction right

DIN direction left

The following applies to sliding doors: DIN direction = closing direction

DIMENSIONS FOR DOORS AND FRAMES

DIN DIMENSIONS FOR DOORS AND FRAMES

	Door leaf size (rebated)	Door leaf size (flush closing)	Minimum wall opening	Recommended wall opening	Maximum wall opening ¹
Width in mm (for wooden frames)	610	584	635	650	680
	735	709	760	775	805
	860	834	885	900	930
	985	959	1010	1025	1055
	1110	1084	1135	1150	1180
	1235	1209	1260	1275	1350
Height in mm (for wooden frames)	1985	1972	2005	2010	2025
	2110	2097	2130	2135	2150
	2235	2222	2255	2260	2275
	2360	2347	2380	2385	2400
	2485	2472	2505	2510	2525

Independent of the DIN dimensions specified in the table on the left, we can manufacture doors in almost every size up to 2485 x 1290 mm.

For most Design and country house doors, sizes up to 2110 x 985 mm are available. For doors with non-standard sizes, the profiles are kept constant and the lateral surfaces are matched to the required size.

THERMAL INSULATION

The heat transfer coefficient (U value) indicates the amount of heat lost between two rooms. The lower the figure, the better the thermal insulation.

Doors with a low U_d value help to conserve energy, and are the perfect choice for separating heated and non-heated rooms, e.g. a living area and a basement. The thermal insulation characteristics of a door set depend on the thickness of the door leaf, the materials installed in it, the frame, and the number and design of the seals.

	Door design/thickness	Heat transfer coefficient
Living space/object	Doors with tubular chipboard core ROE-40	$U_d = 2.00 \text{ W/(m}^2\text{K)}$
	Doors with solid chipboard core VSP-40	$U_d = 1.80 \text{ W/(m}^2\text{K)}$
	Doors with solid chipboard core Solid core-50	$U_d = 1.60 \text{ W/(m}^2\text{K)}$
	Energy-saving door ECO-40	$U_d = 1.00 \text{ W/(m}^2\text{K)}$
Fire prevention	T30(EI30)-40	$U_d = 1.80 \text{ W/(m}^2\text{K)}$
	T30(EI30)-43	$U_d = 1.70 \text{ W/(m}^2\text{K)}$
	T30(EI30)-50	$U_d = 1.60 \text{ W/(m}^2\text{K)}$
	T30(EI30)-65	$U_d = 1.20 \text{ W/(m}^2\text{K)}$
	T90(EI90)-65	$U_d = 1.20 \text{ W/(m}^2\text{K)}$
Smoke protection	RS(S200)-40	$U_d = 1.80 \text{ W/(m}^2\text{K)}$
	RS(S200)-43	$U_d = 1.70 \text{ W/(m}^2\text{K)}$
	RS(S200)-50	$U_d = 1.60 \text{ W/(m}^2\text{K)}$
	RS(S200)-65	$U_d = 1.20 \text{ W/(m}^2\text{K)}$
Burglary prevention³	RC2-40 (SK27/1)	$U_d = 1.80 \text{ W/(m}^2\text{K)}$

Exterior door	Portal-S-56	$U_d = 1.10 \text{ W/(m}^2\text{K)}$
	Portal-S-69	$U_d = 1.00 \text{ W/(m}^2\text{K)}$

³ For more information on heat transfer coefficients by construction, see "Soundproofing"

DOOR FUNCTIONS

FIRE PREVENTION

Standard: DIN 4102 or DIN EN 16034 product standard, DIN EN 1634-1 test standard fire prevention doors

E = Room closure

I = Thermal insulation

C = Self-closing in continuous testing

(C₅ corresponds to 200,000 closes)

- EI₂30-C₅ = 30 min (fire retardant)
- EI₂60-C₅ = 60 min (highly fire retardant, use in export)
- EI₂90-C₅ = 90 min (fire resistant)

Requirements for fire-resistant doors:

- Self closing
- Compliance with the fire requirements laid out in the standard
- Reliable functionality and maintenance over a long period
- According to German Certification full door set including frame and hardware must be supplied by the manufacturer (i.e., door leaf, frame, closers, hinges, locks, and handles). Regulations may differ in other countries.

SMOKE PROTECTION

Standard: DIN 18095 or DIN EN 16034 product standard, DIN EN 1634-3 test standard smoke control doors

C = Self-closing in continuous testing

(C₅ corresponds to 200,000 closes)

S = seal

(S₂₀₀ corresponds to smoke tightness at 200°C)

S₂₀₀-C₅ (smoke tight)

Requirements for smoke-resistant doors:

- Self closing (door closer)
- Reliable functionality and maintenance over a long period
- Full fireproof door set including the leaf and hardware must be supplied by the manufacturer (i.e., door leaf, frame, closers, hinges, locks, handles, sealants including frame hinge seals and retractable floor seals, and threshold joint sealing)

BURGLARY PREVENTION

Standard: DIN EN 1627-1630

	Classes of resistance in acc. with DIN EN 1627	Classes of resistance in acc. with DIN V ENV 1627	Time of resistance in minutes
Correlation table with resistance classification in agreement with DIN EN 1627: 2011-09	RC1 N	- ¹	no manual testing
	RC2 N	WK 2 ²	3
	RC2	WK 2	3
	RC3	WK 3	5
	RC4	WK 4	10
	RC5	WK 5	15
	RC6	WK 6 ³	20

¹ No classification, as testing requirements have been increased.

² The resistance class WK 2 is generally suitable for the correlation of the resistance class RC 2 N, but the glazing can be agreed freely.

³ Supplementary test with a splitting hammer according to DIN EN 1630:2011-08.

SOUNDPROOFING

Standard: DIN 4109

		Classes	DIN 4109	Requirements required reference value (Rw,R)	Detection reference value (Rw,P)
Basic soundproofing classes as per DIN 4109	SK27 ¹	1	27	≥ 27 dB	≥ 32 dB
	SK32 ²	2	32	≥ 32 dB	≥ 37 dB
	SK37 ³	3	37	≥ 37 dB	≥ 42 dB
increased soundproofing as per DIN 4109-5 ⁴	SK40	3,5	40	≥ 40 dB	≥ 45 dB
	SK42	4	42	≥ 42 dB	≥ 47 dB

Requirements acc. to DIN 4109

¹ Entrance doors to apartments (with internal corridor, standard property insert classroom doors)

² Hotel and hostel rooms, and hospital rooms

³ Entrance doors to apartments (without internal corridor, hostels, hospitals)

⁴ To be agreed in the building contract

DAMP ROOM

Standard: RAL-GZ 426 Teil 1-5, DIN EN 16580

Evaluation criteria for damp room door with 48 test cycles:

- 0.5 min Spray phase
- 29.5 min Drying phase
- Water temperature 20°C
- Showering 500 mm from lower edge of door leaf

Requirements:

- The full door set including hardware must be corrosion resistant
- Frame: Damp room frame

WET ROOM

Standard: RAL-GZ 426, DIN EN 16580 (splash water resistant)

Evaluation criteria for wet room door with 96 test cycles:

- 4 min Spray phase
- 26 min Drying phase
- Water temperature 30°C
- Showering 1500 mm from lower edge of door leaf

Requirements:

- Corrosion resistant hardware
- Frame: High-grade steel frame

RADIATION PROTECTION

Standard: as per DIN 6834

Requirements for radiation-resistant doors:

- X-ray protection
- Lead foil all over the opening and closing area
- From weakness equivalent (lipping) 2.0 mm: Radiation protection lock with 2 half cylinders
- Glass opening with lead glazing and lead-backed beads
- Lead-lined door frame

Colour deviations of decor images are possible for printing reasons. RAL/NCS specifications are approximations of the colour systems and may deviate depending on the surface finish. Most of the decor illustrations are shown in reduced scale. Subject to technical changes and changes in the product range.
